

Cut Reconciliation in Half

See how we helped a client improve their inventory process!

Need:

A **national specialty retail chain** needed to revise their research and reconciliation process. The current process used **many reports** during the count's **variance research**. In-house teams, **not dedicated to inventory**, were also slowing things down. **Redundancy** was causing **unnecessary labor cost** and reconciliation time.

- A new process was needed, using **one report** that combined the **Variance** and **Items Not Counted** reports
- **Program tests** were required to run in-stores and through the client's **Store Operations** team

Solution:

RGIS got to work on researching and **evaluating the issue** right away. Experienced **inventory managers** worked directly with the store operations team.

RGIS' inventory teams **tested the new inventory program** in several stores before roll-out.

There were **no disruptions to sales** or regular operations thanks to RGIS' auditors.

Results:

With the new inventory program and RGIS' skilled auditors, the retailer now completes their inventory in **half the time**. The research process has also been cut in half thanks to **eliminating redundancies**.

- **Accurate inventory results** are now possible
- **In-house** employees are no longer pulled away from **regular sales tasks**
