

Offer More Value to Your Clients

With RGIS' experienced staff behind you, across the U.S.

Need:

A medical billing company needed a **full asset inventory**. Without the staff and scanners to complete such an inventory, the billing company **needed a partner**. They connected with RGIS to inventory all state assets within **two 3-floor buildings**.

- Total cost quotes needed **within 1 week** of contact
- Full asset inventory for **two large office buildings**

Solution:

To comply with the project's requirements, RGIS had to work on a tight timeline. The quote, inventory event, and data delivery were **all completed within 30 days**.

RGIS created an **asset data collection program** that allowed for verification and addition of assets.

Experienced, **local teams** were deployed through RGIS' scheduling department. Auditors found **detailed asset information** on new and existing assets.

Results:

The client was able to **comply with the set** requirements and maintained their contract and their reputation as a **full-service medical biller**.

- Project **completed within 30 days** of initial contact
- Existing **asset inventory was updated** and new assets were added to the list
