

Enhanced Inventory Results

By auditors trained to meet your unique needs

Need:

A large public health system required independent valuation of their pharmacy inventories. Due to the **precise inventory tracking and count methods**, the client searched for an ideal partner.

- Teams had to receive specific **client training**
- Auditors had to **scan each physical bottle** individually
- Liquids/gels **counted by volume**, pills **counted per pill**

Solution:

Upon arrival at each inventory event, the RGIS supervisor **reviewed sites** and segregated areas. RGIS completed **on-site mapping that identified locations** and allowed for variance reporting.

RGIS completed on-site mapping that **identified locations and allowed for variance reporting.**

Auditors validated NDC's by **scanning each bottle individually and entering the pill count**. This prevented drugs from being incorrectly counted.

Results:

The client has improved their inventory program by outsourcing to RGIS. They now receive **a variance report** after each event, and **100% verified inventory results.**

- Inventory events are completed **accurately and efficiently**
- **Improved accuracy control**
- On-site mapping led to **increased consistency**

VERIFIED INVENTORY RESULTS
