

# More efficient inventory events

With RGIS' RM2 scanners & efficient inventory teams

## Need:

A **major cancer hospital** had upcoming financial reporting deadlines that had to be met. The client required assistance to meet these deadlines as their current process was **too labor intense**. The organization had used **pen and paper counts** completed by in-house staff in the past.

- Quick, **electronic data return** for financial reports
- Experienced & **trained auditors** to complete inventories

## Solution:

The RGIS team created an **enhanced base program** for the client that utilized **new inventory technologies**.

The process replaced their pen and paper counts and provided for **quick data return**.

**Knowledgeable** and trained RGIS staff worked the inventory adding efficiency. Data was then **returned electronically**, following the inventory.

## Results:

The hospital was able to meet their financial reporting deadlines with ease. Consolidated data was available for **immediate use**, after the event, on a USB drive.

- The client reported substantial cost savings
- The new inventory program needed less staff and fewer man-hours
- RGIS returned data in time for financial reports
