

# Experience Across the US

With district offices across the US and throughout world

## Need:

A regional **marketing and promotions company** had a client who owned **500+ gas stations**. The gas stations were located in and out of their regular service area. They needed **local support** for this project to reduce the cost.

- Holiday project that required implementation on a **strict timeline**
- Hiring and training **temporary staff** for one project was cost prohibitive
- Work included cleaning, replacing, and installing **new signage**

## Solution:

**RGIS** was able to support this holiday project with experienced staff from our local district offices. The teams visited each of the **500+ locations** within 4 weeks.

Without the RGIS teams being ready and able to **jump into action**, the promotions company would not have been able to accept this project and may have lost a long time client.

Teams focused on **accuracy** when installing **promotional materials and signage**.

## Results:

The client was able to retain the account and make their project profitable. Using RGIS enabled them to complete the work **faster and with less cost** than they could've on their own.

- **Local Teams** worked on this project, reducing cost
- **Instructions** were followed with accuracy and precision
- **Project Timeline** and schedule were followed carefully
