

Your Inventory, Your Way

Customized solutions to meet your business needs

Need:

Implementing a **new POS system** is never easy. That's why an online auto parts retailer, with a local "brick and mortar" store came to RGIS. The customer needed a **verified** count of every piece they had to upload to their new POS system.

- Area tickets had to be placed and the warehouse had to be mapped
- An impartial and **verifiable inventory** of all parts was required
- An inventory program with **correct output** needed to be created

Solution:

The RGIS team worked with the client's **management team and ownership** during the project.

The previous POS system had different inventory requirements, making **implementation** more difficult.

RGIS created a new physical inventory program that fit the client's **unique needs**.

Results:

The RGIS team completed the inventory, filling in any missing pieces. The client was able to roll out their new POS system with **verified counts** from RGIS.

- **Objective and Verifiable** data were **ready to upload** to their new system
- **Client Specific Program** was created to collect each necessary data point
- **Real Time Results** allowed the client to roll out their new system on time

“Awesome help and understanding of our unique situation”
